Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Project Name	Create a Google My Business profile

Functional Requirements:

Following are the functional requirements of the proposed solution

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Registration and Authentication	Functional Requirement: Users must be able to register for a Google account or sign in with an existing Google account.
FR-2	Profile Information Entry	Functional Requirement: Users should be able to enter essential business information, including business name, category, address, phone number, website URL, hours of operation, and other relevant details.
FR-3	Content Upload and Enhancement	Diagram Component: Incorporate a "Content Upload and Enhancement" step. Show the upload of images and the input of additional details, with arrows depicting the process.

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	Creating a Google My Business profile enhances online visibility and customer engagement, making it user-friendly for businesses to connect with their audience and grow their digital presence effectively.
NFR-2	security	Google My Business prioritizes security by implementing encryption, authentication, and access control measures to safeguard user data, ensuring a safe environment for businesses to manage their online presence.
NFR-3	Reliability	Google My Business offers a reliable platform for businesses, with minimal downtime and consistent performance. It ensures that your online presence is accessible to customers when they need it.
